QUESTION 1 You are developing a Universal Windows Platform (UWP) app. Your app stores files on a user's device. You need to be able to replace the existing files with new files generated by the user. Solution: You run the `StorageFile.GetParentAsync` method to get a reference to the existing file. Then, you run the `StorageFile.CreateStreamedFileAsynchronous` method to create the new file at that same location. Does this meet the goal? A. Yes B. No Answer: A QUESTION 2 You are developing a Universal Windows Platform (UWP) app. Your app stores files on a user's device. You need to be able to replace the existing files with new files generated by the user. Solution: You run the `StorageFile.OpenSequentialReadAsync` method to replace the existing file. Does this meet the goal? A. Yes B. No Answer: B QUESTION 3 You have two Universal Windows Platform (UWP) apps named Catalog and Research, respectively. You need to create a service in the Catalog app that can be queried by the Research app. Which three tasks should you perform? Each correct answer presents part of the solution. A. Enter the package family name of the Catalog app in the Research app. B. Add an app service extension to package.appmanifest file in the Research app. C. Add an app service extension to package.appmanifest file in the Catalog app. D. Enter the package family name of the Catalog app in the Catalog app. E. Add a Windows Runtime component to the Research app. F. Add a Windows Runtime component to the Catalog app. Answer: ABE

QUESTION 4 You have a Universal Windows Platform (UWP) app. The app has a page that includes the following XAML markup. Line numbers are included for reference only. Users report that the page takes a long time to refresh. You need to improve the load time for the page while maintaining the same layout and functionality. What should you do? A. Specify exact values for the `Width` property in lines 05 and 06. B. Move the attributes from the `BORDER` element at line 02 to the `GRID` element at line 03. Then, remove the `BORDER` elements at line 02 and line 11. C. Move the `Fill` and `Opacity` attributes and value from the `RECTANGLE` element at line 08 to the `GRID` element at line 03. Then, remove the `RECTANGLE` element at line 08 to the `GRID`. Then, remove the `RECTANGLE` element. D. Swap the markup at line 012 with the markup at line 03. Swap the markup at line 10 with the markup at line 11. Answer: C QUESTION 5 You have to connect your app to an online identity provider that uses OAuth authentication protocol. The app must securely use the Web Authentication Broker object for authentication. You need to ensure that the app registers with the provider. Which two actions should you perform? Each correct answer presents part of the solution. A. Call the `GetCurrentApplicationCallbackUri` method. B. Construct a HTTPS request URI. C. Call the `AuthenticateAsync` method. D. Construct a HTTP request URI. Answer: AD QUESTION 6 You are developing a Universal Windows Platform (UWP) app. The app must be available on Windows Phone, Windows tablet devices, and Xbox. When the app is running on a device, you need to determine which members of a specific class you can use. Which of the following methods should you use? A. `Selector.GetIsSelectionActive` B. `UserInformation.NameAccessAllowed` C. `ApiInformation.IsPropertyPresent` D. `Storyboard.GetTargetName` Answer: D QUESTION 7 You are developing a Universal Windows Platform (UWP) app that allows users to take photos and record videos. The photos and videos must be stored in the user's Photos library and Videos library, respectively. The app must not display a user interface for saving files. You need to configure the app. Which set of capabilities should you declare in the app manifest? A. webcam, location, proximity and Pictures library B. webcam, microphone, Pictures library and Video library C. Internet (client), microphone, location and proximity D. Internet (client), Documents library, Videos library, and proximity Answer: A QUESTION 8 You are developing a Universal Windows Platform (UWP) app. You need to provide a solution that moves the scroll bars of the `ScrollViewer` when a user rotates the mouse wheel. Which two actions should you perform? Each correct answer presents part of the solution. A. Add an event handler to the `PointerWheelChanged` event for the current window. B. Evaluate the `CurrentPoint.Properties.IsHorizontalMouseWheel` property of the `PointerEventArgs` object. Call the `ChangeView()` method of the `ScrollViewer`. C. Evaluate the `CurrentPoint.Properties.MouseWheelDelta` property of the `PointerEventArgs` object. Call the `ChangeView()` method of the `ScrollViewer`. D. Update the XAML of the `ScrollViewer` to include the `PointerWheelChanged` event with a new event handler. Evaluate the `Pointer.IsInRange` property of the `PointerRoutedEventArgs` object within the event handler. Call the `ChangeView()` method of the `ScrollViewer`. E. Add an event handler to the `PointerRoutedEventArgs` event for the current window. Answer: DE
